TUTORIAL

CREATE A DOLL FACE

I will try to do this tutorial although my english is ver bad. I hope you will understand anyway.

www.mizzd-stock.deviantart.com

Here we have the original. The wonderful model from Deviantart. Mizzd-stock.deviantart.com.

To make her like a doll we have to change her eyes, nose and mouth. And I will also make her face bigger. And the body a little smaller.

I will paint her face, and also some of her hair.

There is a lot to do, so let start!!

Transforming

Start the change of the face with a selection on the eyes.

Then you choose Ctrl + J

Now you have the eyes on a separte layer above the girl.

Then you do the same thing with the nose and the mouth.

Now you have three layers above the girl with eyes layer, nose layer and mouth layer.

Back to the layer of the eyes. Transform it and make it bigger.

Then you choose a layer mask to clean up the edges around the eyes.

Then you do the same thing with the nose and the mouth.

Transform and make the nose and the mouth smaller. Then you use a layer mask and a brush to remove edges from the nose and mouth layer.

After this you put all the layer of the model together. The model - and the eyes - the mouth and the nose.

If you want to make some changes of the face go to Filter and then Liquify. You can also make the body a little smaller.

After this I have done a selection around the whole face/head and transformed it a little bigger.

Then again I needed a layer mask to remove the edges.

Painting the face

Then its time for airbrushing.

With a soft brush and a very low opacity you paint the face.

You have to use the settings as fit you best.

This is just to show where to change the settings.

When I paint I usual change the settings from time to time. Depends on if I paint the eyes or the skin.

Now its time to cut out the model if you dont already done it. Use the tool you like best. I will put a layer mask and use a middle soft brush for the cut out. But you can do what you like best for the cut out process.

When I cut out a model It mostly will be a lots of hair destroyed so I have to repaint some of it.

For the hair you can find my hair tutorials here below. Copy the links.

I need a good background for the model and choose this one from Dreamstime.

The number of it is 8825849

I dublicate the backrounds layer and use Gussian bluu because I want all the focus on the model.

To change the colour I use the Color Balance. I wanted this to be very colourful.

I used Dodge and Burn for the shadows and the light. And finally I used some Unsharped Mask.

God Luck!
